

Part C: Data Request

Introduction

To investigate the factors associated with client dormancy at STADIOEquities, the following data is required. This data request covers client demographics, account funding, trading behavior, app and platform usage, and marketing engagement. Having a comprehensive dataset at the start will allow for thorough analysis and reliable findings.

All tables will be linked using the **Client ID** field, which must be consistent across all datasets.

Table 1: Client Information

Column name	Data type	Example	Additional information
Client ID	String	CLT-001234	Unique identifier for each client
Registration date	Date	2025-01-15	Date client created account in YYYY-MM-DD format
Age	Numeric, integer	28	Client age in years
Province	String, categorical	GP	Must be one of: "GP", "EC", "FS", "KZN", "LP", "MP", "NC", "NW", "WC"
Stated investment goal	String	Long-term growth	From sign-up form

Column name	Data type	Example	Additional information
Risk appetite	String, categorical	Moderate	Must be one of: "Low", "Moderate", "High"

Table 2: Account and Funding Activity

Column name	Data type	Example	Additional information
Client ID	String	CLT-001234	Must match Client ID from Table 1
Deposit date	Date	2025-01-20	Date client made a deposit in YYYY-MM-DD format
Deposit amount	Numeric, integer	50000	Amount in cents (e.g., R500 = 50000)
Withdrawal date	Date	2025-03-10	Date client withdrew money in YYYY-MM-DD format
Withdrawal amount	Numeric, integer	20000	Amount in cents

Column name	Data type	Example	Additional information
Current account balance	Numeric, integer	35000	Current balance in cents
Account funded status	Boolean	TRUE	TRUE if account has ever had a deposit, FALSE if never funded

Table 3: Trading Behaviour

Column name	Data type	Example	Additional information
Client ID	String	CLT-001234	Must match Client ID from Table 1
Trade date	Date, datetime	2025-02-10 14:30:00	Date and time of trade in YYYY-MM-DD HH:MM:SS format
Instrument type	String, categorical	Share	Must be one of: "Share", "ETF", "Bond", "Offshore"
Instrument name	String	Naspers Ltd	Name of the stock or product traded

Column name	Data type	Example	Additional information
Trade type	String, categorical	Buy	Must be one of: "Buy", "Sell"
Trade amount	Numeric, integer	100000	Value of trade in cents
Trade volume	Numeric, integer	10	Number of units bought or sold

Table 4: Platform and App Usage

Column name	Data type	Example	Additional information
Client ID	String	CLT-001234	Must match Client ID from Table 1
Session date	Date	2025-02-01	Date client used the app in YYYY-MM-DD format
Session duration	Numeric, integer	180	Session length in seconds

Column name	Data type	Example	Additional information
Screens viewed	String	Dashboard	List of screens visited during session
Feature used	String	View portfolio	Specific feature accessed during session
Onboarding step completed	String, categorical	KYC complete	Must be one of: "Registration", "KYC", "First deposit", "First trade"

Table 5: Marketing and Engagement

Column name	Data type	Example	Additional information
Client ID	String	CLT-001234	Must match Client ID from Table 1
Campaign name	String	Welcome email	Name of marketing campaign
Nudge type	String	Deposit reminder	Type of engagement message sent
Nudge date	Date	2025-01-22	Date nudge or email was sent in YYYY-MM-DD format

Column name	Data type	Example	Additional information
Nudge opened	Boolean	TRUE	TRUE if client opened the nudge
Nudge clicked	Boolean	FALSE	TRUE if client clicked a link in the nudge

Summary of Data Request

Data Source	Purpose
Client Information	Understand who the clients are
Account and Funding	Track deposits, withdrawals, and balance
Trading Behaviour	See what clients buy and sell
Platform Usage	Track how clients use the app

Data Source	Purpose
Marketing Engagement	See how clients respond to communication

Data Linking

All tables should be linked using the **Client ID** field, which must be consistent across all datasets. This will allow for a unified view of each client's journey from registration to engagement or dormancy.
